FACTS ABOUT

# Trains & Planes

Heidi Poniatowski

THE GOOD AND THE BEAUTIFUL LIBRARY

Trains that move people are called passenger trains. There are many kinds of passenger trains.

This is a simple coach train. It has seats for people to sit in and space to hold their bags.

Trains can go in tunnels to get from one side of a hill to the other. Going in the tunnel is faster than going up the steep hill.

Trains can run on tracks over water. This train is on a very tall bridge.

An airplane is a fast way  
to go from place to place.  
Have you ever been on a  
plane?

Many passenger planes are called jetliners. That means they have jet engines.

When it is time for the plane to land, the wheels lower down, and the plane lands on the runway.

Trains and planes can both be used to move goods or people from place to place.

FACTS ABOUT

# Trains & Planes

All aboard! Young readers will ride the rails on a train and soar the skies in a plane as they read this fact-filled book about two fun ways to travel. From passenger trains to cargo planes, hopper cars to jetliners, readers will be amazed by what they find! *Facts About Trains and Planes* is perfect for children reading at Level 2A, while six challenge words help them stretch their skills.
